

AQUABRASS

— black series —

CL29NM

Product Description

Wallmount 8" c.c. lavatory faucet

- solid brass construction
- crystal clear water flow
- drain not included
- 1/2" connection

height: 4"
overall projection: 9 1/4"
flow rate: 1.3 gpm*

FINISHES

Standard
Polished chrome (pc)

Custom
15 custom finishes available
(ask your local Aquabress authorized dealer for details)

*Optional low flow aerator: #ABAE443360010 (1.2 gpm)

AQUABRASS

TECHNICAL DATA

Minimum dynamic pressure	0.5 bar
Maximum operational pressure	5 bar
Recommended operational pressure	1-5 bar
It's recommended to use a pressure reducer in case of static pressure superior than 5 bar inside the waterpipe.	
Maximum hot water temperature	80° C

INSTALLATION, MAINTENANCE AND PRELIMINARY CHECKING PROCEDURE

In order to get your device work correctly and fine in time, must ensure compliance with the mode of installation and maintenance described in this booklet. Relying on a qualified plumber.

Make sure that the system is free from all debris and impurities existing.

INSTALLATION

Fig. 2: To carry out an optimal positioning, it is necessary to perform a test assembly before placing the valve in the wall, while it is still possible to regulate the depth of the wood support. Fix the valve housing on appropriate plate (4) with the three screws (1-2-3) and afterwards screw the wood support on the horizontal uprights at the desired height.

Fig. 3: Make three hole on the wall, respect the distance as show in fig. 1. The suggested diameter is \varnothing [35.00] 1 3/8" in letting the gasket lay on the wall cladding.

Fig. 4: **The male insert (2) placed on your rough should be carefully marked (1) on the topmost point before unscrewing it from the rough body**

Fig. 5: The male insert (2) must be fully inserted on the spout (3), vertical point on top, and locked in place with the Allen screw (4).
Now install the spout into the rough. Screw all the way-in but do not over tighten. It should line-up currently.

Fig. 6: Position the gasket (1) into the marble support (2), inserting it into the body. Place the handle (3) on the broach, inserting the Teflon ring. Verify the correct position of this handle considering the opening/closing control. Screw the spout in place.

Fig. 7: Place the marble covering on the handles and spout, in a softly way and paying the maximum attention. Once the threaded hole correspond to the cover hole, insert the grub screw.
Push the marble cover until the wall surface. Screw the little lever into the handle body and verify the correct operation of it.

Fig. 8: To clean the aerator (1), remove it from the spout. Then soak it in a vinagar and water solution to remove lime build-up. Once parts have been cleaned, reinsert the aerator.

CARACTERISTIQUES TECHNIQUES

Pression dynamique minimale	0.5 bar
Pression de service maximale	5 bar
Pression de service recommandée	1-5 bar
Il est recommandé d'utiliser un réducteur de pression en cas, dans le système hydraulique, il y a des pressions statiques supérieures à 5 bar.	
Température maximum d'eau chaude	80° C

INSTALLATION, D'ENTRETIEN ET VÉRIFICATIONS PRÉLIMINAIRES

Pour assurer le bon fonctionnement du produit et il puisse durer dans le temps, il est nécessaire qu'ils soient remplies les procédures de installation et l'entretien définies dans la brochure.

S'appuyer sur un plombier qualifié. S'assures que les tuyauteries soient nettoyées par toutes saletés et résidus.

INSTALLATION

- Fig. 2:** Pour effectuer un positionnement optimal il est nécessaire de faire un test d'assemblage pour déterminer la profondeur du support en bois avant de fixer la valve dans le mur. Placer le boîtier de la valve sur le support en metal (4) et serrer les trois vis. Visser le support en bois sur les montants horizontaux à la hauteur désirée.
- Fig. 3:** Faire trois trous sur le mur, respecter la distance comme illustré en fig. 1. Le diamètre recommandé est \varnothing [35.00] 1 3/8" afinque le joint torique scellé au revêtement.
- Fig. 4:** **L'embout mâle (2) déjà placé sur votre brute devrait être marqué sur le point le plus haut avant de les dévisser.**
- Fig. 5:** Une fois retiré l'embout mâle (2) doit être complètement insérer sur le bec (3), point vertical en haut, et bloqué avec la vis "Allen". Re-installer le bec sur le brut. Viser à fond , mais ne serrez pas trop.
- Fig. 6:** Placer le joint torique dans le support sous le marble. Insérer la poignée sur la tête céramique, en insérant l'anneau PTFE. Vérifier l'emplacement de la poignée en rapport au mouvement d'ouverture et de clôture. Fixer la poignée avec la petite vis.
- Fig. 7:** Insérer la couverture en marbre sur son support, en faisant attention de ne pas l'endommager. Quand le trou fileté du support est en ligne avec le trou de la couverture, insérer la vis de retenue. Glisser la couverture jusqu'au le mur. Visser la levier sur la poignée et vérifier le fonctionnement.
- Fig. 8:** Quand nécessaire, dévisser l'aérateur (1) pour le nettoyer. le tremper dans un mélange de vinaigre et d'eau, pour retirer le calcaire qui pourrait s'y être accumulé. Une fois les pièces nettoyées, replacer l'aérateur.
